

Another Kind of Terrorism !

With today's modern techniques in testing chemicals, there is no excuse for the suffering and death of millions of animals in laboratories around the world.

It has been brought to my attention that the European Commission is planning to introduce a chemicals testing legislation that will lead to the death by poisoning to as many as 10 million laboratory animals.

These tests are repedative and have been already discredited by a great number of respected scientists in the community, as well as by the chemical industry also !

With all the terror in the world today, we need not introduce more !

Asking for your support in alternatives to live animal research !

Sincerely

Mary Alice Pollard
